DS4H projects, 2025-2026

Projects evaluation

- Project per se (87% of the total grade)
 - Written report (35% of the project grade) (evaluated by professor staff)
 - Deadline : **12 May**
 - Moodle : KMUMP21U - Project Methodology S2
 - Oral presentation (35% of the project grade) evaluated by the earnings jury
 - **18-21 May**
 - Rehearsal on 12 May
 - Supervisor(s) assessment (30% of the project grade)
- Project Methodology (13% of the total grade)
 - Participation (50% of the methodology grade)
 - Oral practice session (50% of the methodology grade)

Written report - format

- 10 to 15 pages (+references) for individual project
 - A guideline, not a hard limitation
 - Depends on number of illustrations, font size...
 - Be brief, concise, but complete
 - No blablabla
 - But you have to explain your topic to someone who has not spent days in your subject
- About 25 pages for group projects
 - Depending on the number of students
 - Joint introduction + joint conclusion is possible
 - Contribution of each student should be clearly visible

Written report - content

- Typical Layout

1. Introduction

2. Materials and methods

3. Results

4. Conclusions

Written report - content

- Typical Layout

1. Introduction – What is it about?
2. Materials and methods – How is the problem tackled?
3. Results – What has been done?
4. Conclusions – Which achievements?

Written report - content

- Typical Layout

- Résumé

1. Introduction – What is it about?

- Context, state of the art
- Objectives
- Research question...

2. Materials and methods – How is the problem tackled?

- Tools, measurements, maths, approach...

3. Results – What has been done?

- Developments
- Results presentation and explanation

4. Conclusions – Which achievements?

- Discuss results
- Perspective and future work

Written report – do not forget

- Think like a stranger to your work
 - Nobody knows your subject as well as you and your supervisor do
 - Step back, remind yourself of the first time the subject was presented to you
 - Do not overuse abbreviations
- Give context
 - It is often difficult to understand what you do if your objectives are not clear
- Give the report table of content
 - It helps navigating and understanding your document
- Outline your contribution
 - The whole point is to evaluate your work

Written report – do not forget

- Beware of plagiarism
 - You can reuse any illustration or any text...
 - ... but you have to acknowledge authorship (cite sources)
 - Otherwise this is likely to be considered as a cheating attempt
- Make backups
 - “I lost my beautiful report yesterday” is a weak excuse

Written report - example

- *"Studying the efficiency of Eye-tracking techniques in real-time optimization tasks"*
 - Context :
 - What is the starting point? What was already studied?
 - What is "eye-tracking"? What are "optimization tasks"?
 - What are the objectives? How can eye-tracking improve optimization tasks?
 - Material and methods :
 - What is the equipment used? What data is extracted? What experiments are planned? How are results processed?
 - Results
 - Describe the operational part (hardware, software). What are the experimental results?
 - Conclusion
 - Analyse results. Do they reach objectives?
 - What is the next step?

Written report - LargeLanguageModel

- Can ChatGPT write my report?
 - Yes, it can
 - But it will do a poor job at it!
- Is it allowed to use ChatGPT?
 - Yes, it is
 - But be smart when you use it
 - Use it to improve your English, search for errors in your text, improve your wording, be more concise...
 - Be critical, do not take anything generated for granted, read and proof it
 - If you use it smartly it will
 - Improve your report
 - Consume more time than not using it
 - ChatGPT cannot replace you

Oral presentation - format

- On 18-21 May
 - In front of a 2-3 persons (kind) jury; open to public
- 15 minutes presentation
 - Check your timing
 - Be concise, yet complete
 - Languages (English vs French)
- Followed by questions (~10 minutes)
 - To better understand your presentation
 - To clarify your contribution
 - To help you defending your work

Oral presentation - content

- Typical Layout
 1. Introduction
 2. Methods
 3. Results
 4. Conclusions...
- ...The same layout guidelines apply to presentation and report
- The same information is needed

Oral presentation - slides

- You should have slides
 - It is easier to speak using a presentation support
 - It helps you not to forget important points
- Do not overload slides
 - No more text than needed
 - Use keywords or short sentences
 - One good image is better than a thousand words
 - Create more slides rather than putting too many things on a slide
- Favor content over form
 - Fancy slides are nice... but content is even better

Oral presentation - timing

- Time your presentation correctly
 - Time flies: no more than one slide per minute (average)
 - A single diagram or table can be long to comment
- Speak at normal pace
 - If you cannot breathe to make it on time, shorten your presentation
- Before spending time on slides content, define your presentation layout
 - Introduction : 2 slides (1 context, 1 objectives)
 - Methods : 2 slides
 - Implementation : 1 slide
 - Results : 5 slides (3 result figures, 1 comparison, 1 analysis)
 - Conclusion : 2 slides (1 discussion, 1 conclusion)

Example:

Oral presentation – oral preparation

- Control your presentation timing
 - The presentation must be repeated (aloud) and time-controlled
- Keep the presentation lively
 - Avoid memorizing your text
 - Avoid reading your text
 - Do not read slides, speak in front of them
 - Turn towards the audience, not towards the blackboard
- Check that the projection works in the examination room
 - Do not forget your adapter if needed
 - Check your setup in the examination room ahead of the defence days
- Make backups
 - “I lost my beautiful presentation yesterday” is a weak excuse
